

THE SALON BOIS ENERGIE A UNIQUE EXHIBITION!

The Bois Energie is a unique Exhibition whose distinctive hallmark is firmly rooted in :
- its end-to-end coverage of the entire wood energy chain coupled with
- a strong focus on bringing wood energy to life.

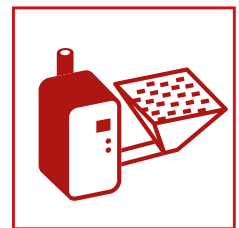

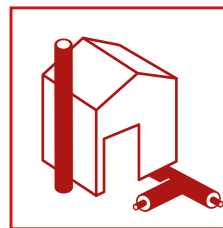

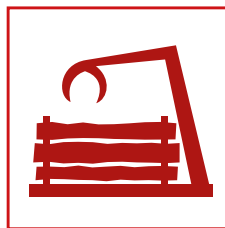

This leading event also carries the distinctive title of the « world's first wood energy exhibition » pioneering as it did in 1998 the first exhibition in the world for the sector to advance wood energy's international development.

The entire wood energy chain

Equipment suppliers and service providers, fuel suppliers and logistics companies all assemble at the Bois Energie Exhibition to provide a single and total overview of every stage in the wood energy chain. It starts with gathering virgin or waste materials to produce a range of wood fuels and moves upstream, to cover a multitude of technological options to produce heat at a domestic, industrial or local authority level, or equally to generate combined heat and power.

This total overview of wood energy encompasses the following principal activities:

- forestry machinery
- saw-splitters and bundlers
- chippers
- pellet presses and briquette presses
- transportation and handling
- logs, pellets, briquettes, wood chips
- domestic boilers
- stoves, ovens and cookers
- fireplaces
- automatic boilers
- cogeneration
- gasification
- energy service companies
- district heating
- consultancy
- research and institutions

A real international window to wood energy

Renowned across all Europe as the international show place and meeting point for the French market, a large number of international exhibitors (coming from 19 countries) present their latest innovations and products at the Salon Bois Energie, making it the place to access and gain an insight into the main European market trends.

BRINGING WOOD ENERGY TO LIFE

The unique strengths of the Salon Bois Energie, for which it has gained its notoriety and distinction, is to actively go the extra mile to portray the sector in its best and most dynamic light, what we call « wood energy in action ».

Operational stoves and fireplaces

A specially constructed internal smoke extraction system permits indoor exhibitors to present their stoves and fireplaces fully operational and packing out the heat for visitors to admire and appreciate.

Working wood fuel equipment

Across an outside area, a full range of wood working and fuel preparation equipment runs live demonstrations throughout the duration of the exhibition, dynamically showcasing the production of wood fuels.

The Innovation Competition

Exhibitors have the opportunity to compete for the prestigious « Bois Energie d'Or » of the Bois Energie Exhibition Innovation Competition which is awarded to companies presenting new market changing technological or service breakthroughs.

Conferences

High level conferences from industry and pan-industry bodies present current themes and debate the key topics of the day. Presenters offer both domestic market as well as international comparative perspectives.

PROFESSIONAL VISITORS

Professional visitors come from all across Europe and further afield to see the latest advances in wood energy technology and services.

In addition to visiting the exhibition, they also benefit from :

- access to high level conferences
- a business meeting space
- demonstrations of working equipment
- guided tours
